UNDERGROUND SPACE

Index, Volume 8 **January–December, 1984**

This index lists feature articles, papers, editorials, and interviews appearing in *Underground Space*, Volume 8, January–December 1984. The entries are arranged in the following categories:

I. General Articles
II. Tunnels and Deep Space
III. Earth Shelter and Architecture
IV. Planning, Development, and Public Policy

I. General Articles

Gillis, D. C. AUA: the phoenix rises (editorial); 8:4, 222–223.

———. Infrastructure: the revitalization of public works; 8:1, 7–12.

Moreland, F. L. A midterm message from the president of the AUA (editorial); 8:2, 60–61.

Sterling, R. How to marry our common interests (editorial); 8:3, 138–139.

Wiedeman, J. H. Infrastructure: underground solutions should become part of every engineer's thinking (editorial); 8:1, 2–3.

II. Tunnels and Deep Space

Bieniawski, Z. T. USNC/TT plans year of ambitious programs (editorial); 8:5–6, 296–297.

Broch, E. Development of unlined pressure shafts and tunnels in Norway; 8:3, 177–184.

Calminder, A. and Sagefors, I. Innovative underground storage for heavy crudes and sensitive petroleum products; 8:1, 31–35.

Girnau, G. Cutting construction costs for subways and commuter railways; 8:5–6, 345–351.

Holopainen,P. International perspective: notes from the Finnish underground; 8:1, 4–6.

Keville, F. M., and Sutcliffe, H. The northwest extension of the MBTA Red Line in Boston; 8:4, 253–258.

Köhlin, S. E., and Szikriszt, G. Producing gas from solid waste in excavated rock chambers; 8:1, 24–28.

Kuesel, T. R. A better way to build tunnels; 8:1, 29–30.

Laporte, H. The LEP collider: a large underground laboratory; 8:4, 241–246.

Lemley, J. K., and Robertson, F. P. Cooling water system contract and construction for the Seabrook Nuclear Power Plant; 8:5–6, 341—344.

Marshak, M. Proton decay experiments in deep mines and tunnels; 8:4, 247–252.

Muir Wood, A. M. Flexibility in tunnel design can be ensured by better contracts (interview); 8:2, 67–71.

Naito, K. The earth pressure balance shield: case studies, current research, future prospects; 8:2, 89–94.

Paulson, B. C. Urban tunneling in Japan; 8:3, 185–190.

Schreyer, J. Dust prevention measures during shotcreting operations; 8:2, 95–98.

Tigner, M., Sanford, J., Gilbert, P. H., and Gursoy, A. Superconducting Super Collider: reference designs study; 8:4, 229–240.

Whittington, D. W., and Langston, R. E. Evolution of cavern design for the Strategic Petroleum Reserve; 8:4, 259–263.

III. Earth Shelter and Architecture

Anderson, B. Waterproofing materials and techniques for cut-and-cover structures; 8:2, 99–110.

Baggs, S. A. The First International Earth Shelter Building Conference; 8:3, 149.

Boyer, L. L. Earth shelter goes international; 8:3, 146–148.

Bennett, D. J. Architectural design of the Civil and Mineral Engineering Building; 8:2, 83–88.

Carmody, J., and Sterling R. Design considerations for underground buildings; 8:5–6, 352–362.

Gillies, A. D. S., Elifrits, C. D., Erten, Y. M., and Aughenbaugh, N. B. Tempering air with tunnels: full-scale tests and design dimensions; 8:4, 270–281.

Fairhurst, C. Evolution of the Civil and Mineral Engineering Building; 8:2, 72–76.

Farray, D. The architecture of French subways and underground railways; 8:2, 117–124.

Goldberg, L. F. A comparative experimental evaluation of five earth-sheltered houses; 8:1, 36–43.

Hanzal-Kashi, A., and Combs, E. R. Loan officers' perceptions concerning earth-sheltered housing: risk, complexity, and advantage; 8:3, 191–195.

Landa, E. R. Radon in earth-sheltered structures; 8:4, 264–269.

Lesiuk, S. Classification of plant canopies for energy conservation; 8:3, 164–168.

Lowing, A. N. Earthquake considerations for earth-sheltered residential buildings; 8:3, 169–173.

Nelson, C. R. Geotechnical design of the University of Minnesota CME Building; 8:2, 77–82.

Ribot, J. C., Rosenfeld, A. H., Floquet, F., and Lührsen, W. Monitored low-energy houses in North America and Europe: a compilation and economic analysis; 8:3, 156–163.

Salomone, L. A., Yokel, F. Y., and Wechsler, H. Influence of soil type and gradation on the thermal resistivity of soils; 8:5–6, 363–371.

Standford, G. Thermal environment of the White Cliffs lithotectural dugouts; 8:3, 150–155.

Towson, P. G., and Hausmann, M. R. Geotextiles for earth shelters; 8:3, 174–176.

IV. Planning and Development

Anttikoski, U. V. and Raudasmaa, P. J. Geotechnical maps of Helsinki and their use in tunnel planning; 8:4, 282–285.

Ashley, D. B. Owner-controlled insurance programs for underground construction; 8:2, 111–116.

Birkerts, G. Harnessing the nineteenth century: subterranean urban systems, 8:1, 44–51.

Duffaut, P. Subsurface utilization and underground engineering; 8:3, 206–210.

Hughey, J. B., and Tye, R. L. Psychological reactions to working underground: a study of attitudes, beliefs, and evaluations; 8:5–6, 381–386

Johansson, S. Costs of mined oil caverns at Neste Oy's Porvoo Works in Finland; 8:5–6, 372–380.

Kjelshus,B.Encouraging underground space development: modifications to Kansas City's building code and zoning ordinance; 8:5–6, 320–330.

Meskers, A. M., and Feijen, Th.A. The Dokhaven: an underground plant for sewage treatment in Rotterdam; 8:1, 18–23.

O'Day, D. K. Aging urban water systems: a computerized case study; 8:1, 13–17.

Sterling, E. E., and Circo, J. C. Legal principles and practical problems in the two-tier development of underground space; 8:5–6, 304–319.

Ullrich, C. R., Hagerty, D. J., and Corradino, J. C. Developing underground space in Louisville, Kentucky; 8:3, 196–205.

Woodard, D. R., and Babler, L. The Kansas City underground: a future rooted in the past (interview); 8:5–6, 331–340.
